

**USE OF ANGIOTENSIN II FRAGMENTS AND ANALOGS THEREOF  
IN TISSUE REPAIR**

Abstract of the Disclosure

5           Peptides consisting essentially of Angiotensin II fragments and analogs thereof  
are useful in accelerating wound healing. These compounds form the basis of  
compositions useful for accelerating wound healing, in which the active agent is present  
in an amount effective to accelerate wound healing. Preferably, the compositions are in  
the form of matrical of micellar solutions. The peptides may include amino-terminal  
10 and/or carboxy-terminal domains, and/or may be PEGylated to resist peptidase attack  
yet retain their usefulness for accelerating wound healing.
